

Hey Camp Families!

We hope that you and your family are doing well and staying safe. We are missing our camp families terribly and want to stay connected with you and give your children some amazing educational science-based activities to do while they are stuck inside.

We recognize that you may be feeling overwhelmed. You're helping your kids with school work. You're constantly looking for new ideas for at-home fun. You're doling out snacks every 30 minutes. You're cleaning up after everyone all day long. To top it off, many of you are further burdened by working from home.

No one knows when life will return to "normal," but one thing is certain: **We've got you covered with LOTS of great activities from Extreme STEAM Science Kids! (ESSK)**

ESSK was created BY CAMP PROFESSIONALS and it has been offering summer science programming to camps for many years. Building on that experience, they have now added online programs that your children can enjoy from the comfort of your homes without missing a beat of fun, education, and entertainment - just like at camp!

Your children may be stuck at home, but you can make these days at home a time for new learning experiences that are fun.

We want to make sure that your children are staying entertained, engaged, educated and continuing to develop! The ESSK programs are geared towards children in grades K-9 with a wide variety of subjects to appeal to all interest levels. They offer a large collection of interactive science-related activities that will keep children entertained while also expanding their minds. Their website is specifically designed to spark any young mind's interest in science, technology, engineering, and math. At its very core, it aims to bring STEAM-based learning to children at home.

ESSK, one of the leaders in Science Programs for Camps, is offering a range of programs that you can share with your children. Many of these programs are FREE. While some of the programs require add-on parts, e.g., robots, they are generally available at heavily discounted prices.

The program offerings in robotics, engineering, and coding are only the beginning. The ESSK team is working hard to bring new and exciting science programs to you and your children.

Want More??

ESSK has also scoured the web for the BEST online science learning resources for children. They have developed a listing of highly recommended science-based websites for interactive learning and are just what your children's' curious minds need.

We hope you and your children enjoy these activities and stay engaged, entertained and busy during this time indoors. Most important, we look forward to having you back with us for camp this summer!
